WHAT'S HOT

TOP NEW LAUNCHES, CRAZY CONCEPTS AND TOYS YOU NEVER KNEW YOU NEEDED

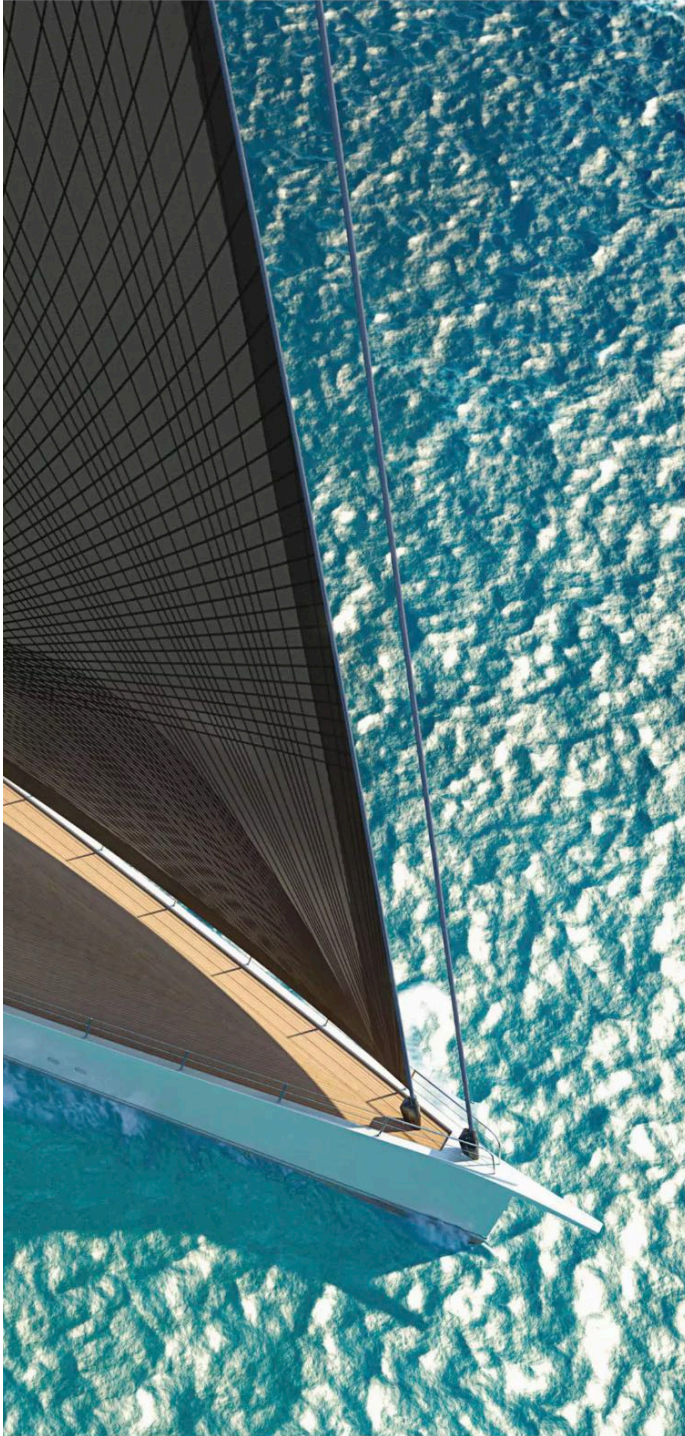

Kaze

Philippe Briand's office has just published a 60m ketch concept which aims to combine maximum comfort with greater sustainability. As a ketch, Kaze's twin masts are Panamax rated, with easier to handle sail areas. But Briand has maximised the hull volume to offer a staggering 499 gross tonnage of luxurious internal space, all immaculately styled in contemporary fashion by FM architettura. The drop-down bulwarks and hydraulic aft platform are features more commonly seen on motoryachts. Under sail, the boat can regenerate its own power as the prop turns, pumping out dozens of kilowatts day and night for emission-free operation.

Valo Hyperfoil

The ubiquitous jet ski gets the foiling treatment in this new product from a California-based marine start-up. Valo can carry two people, using a 108hp electric motor and three foils to carry them 60cm above the waves. Top speed is an impressive 50 knots, while electronic flight controls keep the craft stable. The foils fully retract for launch and recovery. The first units hit the water this summer, with full production ramping up in 2024.

Expected price is around \$59,000. [boundarylayer.tech](https://www.boundarylayer.tech)
